

LAB SAFETY AWARENESS WEEK

We're All in this Together!

Safety is everyone's responsibility.

When each person in the lab does their part, the lab is a safer place to work.

- Avoid working alone in the lab. If working alone is unavoidable, use a [remote buddy system](#).
- Review [standard operating procedures](#) and follow them carefully.
- Review [chemical Safety Data Sheets \(SDS\)](#) and be knowledgeable about the hazards of the chemical being handled and waste disposal.
- Frequently [check hazardous waste accumulation storage areas](#) and [arrange for disposal as needed](#). Avoid accumulating large amounts of hazardous waste.
- Keep areas tidy and organized. A clean lab is a safe lab!
- Include safety topics in your lab, school, and departmental meetings.
- [Email EH&S staff](#) for support in safely achieving research goals.
